allocate fixed peripherals

↳ list scheme

taps
printers
punches
readers
TTY's?

i.e. spot types of objects

a user? can ask for any object beyond that out
he now has

allocation
again?

how
allocate?
CPU

disk unit attached to allocation block?

idea on disc allocation

each person? declares how much temp space he needs now
and his ~~total~~ max

we keep as cushion an unused space equal to max max
once we have to use any of this cushion, only one person? is allowed
to increase into it.
