DECLARE PROCESS SWAPPED-ECS CROSS-SECTION (DF:XSEC)

IP1   D: change in cross section

Action: Increments or decrements to process' swapped ECS
cross section, getting or freeing space in the global
swapped ECS pool. In the following cases, an F-return
is initiated and the   actual adjustment is
returned in x6:

    a) If not enough swapped ECS is available from the
       pool on an increase request, as much as possible
    is obtained.

    b) If a call attempts to decrease the cross-section
       below the amount of ECS currently in use by the
       process, the cross section is set to the amount
       in use.
